

- ***Phase 1 go live of Internal Digital Transformation Program***
- ***Two new wins in North America for Technology Transformation projects.***
- ***EInfoBiz at Collaborate 2018 in Las Vegas***
- ***EInfoBiz at CIO Summit in Toronto***

We strongly believe that technology innovation and changing the way our own HR , Finance & Sales teams work today through digital transformation is the key driver to fuel our innovation story & path to increased business in the cloud arena. We embarked on our internal transformation program in May 2018 and in a period of 12 weeks we went live with our phase 1 of the program at the end of which we had a transformed recruiting application & a cloud based Core Human Resources application in Oracle Fusion Cloud , it currently has helped us reduce our time to hire by 9% and HR operations effort to maintain employee data by 12 % , since we are in rapid adoption across locations for this cloud based system, we envisage exponential reduction in our hiring & HR operational costs through this program.

Our Phase II of the program will witness transforming our Sales process along side adding a talent management application to our current manual performance evaluation & Employee Career development process.

Experiencing the transformation we try and coach our customers to adopt, has made our consulting team more confident of learning through our internal program experiences and advocating the right solution based on our clients bussiness processes and operating environment.
